Well–rounded Frontend Engineer with over 12 years of experience building customer–facing and internal tools. Primarily focused in React accompanied by strong professional backend experience in backend languages such as Ruby on Rails and Python.

Work Experience

Contract/Freelance   **Self-Employed**   **November 2023 - Present**
New York, New York

- https://www.bobbysheehanlol.com/ - Freelance website for international comedian Bobby Sheehan.
- https://www.themcu.fyi/ - A way to track your Marvel Cinematic Universe progress. Save what you've watched and get recommendations based on your position in the timeline.
- https://outlier.ai/ - As a 1099 employee, I create, rate, and rank the prompts and responses to various AI currently in development.

Senior Frontend Engineer   **Caesars, inc.**   **January 2022 - November 2023**
Jersey City, NJ

- Immediately began contributing to the Caesars Casino redesign for their web, Android, and iOS platforms.
- Became a major component in adding games from various suppliers and put in charge of our Jackpot Integration.
- Eventually took part in the Caesars Palace Online standalone Android app development and launch.
- Was also designated release captain for all three platforms, conducted interviews (both behavioral and technical) and was an integral part of our onboarding process.

Software Engineer   **Haven Life**   **July 2020 – December 2021**
New York, NY

- Single handedly implemented a full UI redesign. In the redesign, I lead the effort to make all forms ADA compliant.
- Helped build the platform from the ground up. These responsibilities included QA, writing unit tests, leading the css design patterns, and meeting with the design team to ensure proper UX conventions.
- Had to learn Angular and Typescript in order to quickly contribute to company-wide goals including getting the platform to account for 90% of Annuity filings (previously 0%).

Full Stack Developer   **Lola Travel**   **May 2019 - March 2020**
Boston, MA

- Created end to end features, such as a shareable calendar integration for users' bookings.
- Lead our travel credit system feature that allowed travel agents to more effectively handle cancellations during the COVID-19 pandemic. This feature also enabled travelers to transfer credit and let them know when credits were to expire to get the best out of their money during this time.
- Learned and became proficient in React and Python to deliver features and meet company deadlines.

Senior Full Stack Developer   **Gamer Sensei**   **March 2016 - March 2019**
Boston, MA

- As the first full time employee, I quickly became a pivotal role in speccing and developing major site improvements.
- Was the primary contact for our third party international payment system for our team and the provider, Xsolla.
- Lead two full site redesigns which were run by data driven design. Included collaboration with the CTO to conduct A/B testing and the design team to orchestrate focus group testing.
- Created virtual currency system, international payment integrations, and recurring subscription services.

Web Developer I   **ESPN, Inc**   **June 2012 - October 2015**
                                             Bristol, CT

- Created APIs for in-house and third party applications, such as espn.com and the ESPN app.
- In charge of emergency maintenance of the APIs.
- Quickly became proficient in Groovy, Bootstrap, AngularJs, and a proprietary language named Tea as demanded for the job.

Education and Certifications

- **B.A. Multimedia Web Design and Development w/ specialization in Human Computer Interaction**
  University of Hartford, Connecticut.   **2009–2013**
